

Sprint 4: Goals

By the end of Sprint 4

- We would have refactored the implementation for any active user to receive any message sent to them and not just the notifications.
- The user would be able to send and receive group messages.
- All the bugs from the previous Sprint would be fixed.
- We would have implemented some Operations related features such as user statistics etc.
- Refactor and make all basic CRUD operations for Groups and Users to be completely functional
- A moderator would be able to remove users from a group
- A moderator would be able to handle and accept user requests to join a group
- A group would have the option to require additional password to open the group.

Optional Goals

- A user can follow and receive updates about other users or groups
- Allow users to exchange media files
- Allow users to send emojis/emoticons
- Implement functionality of wire-tapping for Government officials
