

Sprint 3: Goals

By the end of sprint 3

- We would have implemented our own login/ signup feature
- The user would be allowed to edit his profile data
- The user would be allowed to retrieve other users profile data
- The messages would follow the factory pattern in both client and server side
- The user would be greeted with unread messages upon login
- The user would be allowed to retrieve a specific chat
- The user would be allowed to search for a user/ group
- The user would be able to create/ delete a group, add/ remove a user to a group
- The user would be able to send group messages
- Update persistence testing logic

Optional Goals:

- Implement secure salted password hashing in database
- Implement a private user profile
- The user would be allowed to get all unread messages
- Retrieve a group profile
- The user would be allowed to search for a user in a group
- Add multiple moderators to a group
- Implement approval required feature in a group
- Add a group to a group, delete a group from a group features would be implemented
