Score: 95

Comments

Commitment: The commitment goals were discussed with the client and submitted on time.

Goals: The team had not closed the sprint on JIRA -- the team stated that it was due to some roadblocks in the DB. Some tickets on JIRA were assigned to wrong people.

Planning, Estimation, Execution: The team did pretty well on execution, however planning could be better. It is normal to not be able to plan perfectly, but in such cases you can always revise your commitments and talk to the client.

Communication: The team communicated well. The scrum-master was proactive in conducting Standups. The client was kept in the loop.

Sprint Demo: Sprint Demo was successful. The team was able to demo the features to the client. Some design choices were discussed as there was a difference in how the client and team had inferred a feature. It is fine to implement the feature as you wish but I would advise to brainstorm it.

Distribution of work: Work load is fairly distributed.

Code quality: Good use of design patterns. There are classes which are missing javadoc. Javadoc at this point in sprint should be a given. Take care of all the code smells.

Testing: Good use of DB for testing. Close all the resources after using it.

Overall, good work as a team.
